## Product Description

### Save energy white light solar outdoor LED street light 60W with back of solar panel

Solar street lights are raised light sources which are powered by solar panels generally mounted on the lighting structure or integrated into the pole itself. The solar panels charge a rechargeable battery, which powers a fluorescent or LED lamp during the night.

Solar street lights are independent of the utility grid. Hence, the operation costs are minimized.

Solar street lights require much less maintenance compared to conventional street lights.

Since external wires are eliminated, risk of accidents are minimized.

Electricity produced from solar panels is non-pollutive.

Separate parts of a solar panel system can easily be transported.

Energy costs can be saved.
